

OmniSaaS Suite — User Guide

Mergify Digital · Price: \$29.99/month or \$149 one-time (via Whop)

What it is

The OmniSaaS Suite is one hosted platform that bundles many small, single-purpose tools from Mergify Digital behind a single license. Instead of buying each small tool separately, a Suite license gives you access — gated by the license/scope attached to your purchase — to the tools included in the bundle.

Be clear about the scale: most tools in the Suite are small utilities that each do one job (one calculator, one PDF generator, one media transform). The value of the Suite is breadth — many small jobs in one place under one license — not that each tool is a large standalone product. Some tools that are also sold separately (for example, PropShield-related tools, PuzzleForge, PrintReady DPI, and RuleGuard) have their own guides; this guide covers accessing the Suite itself.

Who it's for

- Buyers who expect to use several Mergify Digital tools and prefer one bundle license over separate purchases
- Traders, print-on-demand sellers, KDP publishers, and small operators who want a toolbox of small calculators, PDF generators, and media utilities

Requirements

- A Whop purchase of the OmniSaaS Suite (\$29.99/month or \$149 one-time)
- A modern web browser and an internet connection
- The access/license instructions delivered through Whop after purchase

Getting started

1. **Check out on Whop.** Purchase OmniSaaS Suite from Mergify Digital on Whop.
2. **Read the delivery in Whop.** Access details and license instructions are delivered through Whop after purchase. Follow those instructions exactly — they are the authoritative source for how to reach the Suite and sign in, and public/hosted availability details are provided there rather than in this guide.
3. **Sign in with your license.** Use the license information from your Whop delivery to sign in / activate. Access is scope-gated: your license unlocks the tools included in the Suite bundle, and tools outside your license scope will remain locked.
4. **Confirm access.** After signing in, open one or two included tools and confirm they load without a license error before relying on the Suite for real work.
5. **Keep your license private.** Do not share it. One license is for one user (see the Terms of Service draft / your Whop purchase terms).

If you cannot find your delivery: check the product in your Whop account/library and your purchase email first, then contact support (below).

What's included — at a high level

Tool names below are as listed in the Mergify Digital catalog. Each is a small, single-purpose tool; inclusion and scope can be confirmed in your Whop delivery.

Trading utilities

- PropShield-related webhook guard tools, including the ICTShield killzone check/gate
- EdgeBet EV Calculator — manual-entry expected-value / no-vig / Kelly mathematics
- FundingRadar — funding-rate snapshot and supplied-snapshot modeling tools
- PineBacktest Monte Carlo — resampling statistics on a pasted list of trade results
- Options expected-move calculator
- RuleGuard Consistency — prop-firm consistency-rule checker (also sold separately)
- Journal trade calculator — single-trade P&L / R calculation
- AlphaBrief — formats a trade you supply into a Discord-style signal card (it does not post automatically and does not generate signals)
- PropSync Fanout — multi-account allocation preview only (dry-run; it sends no orders)

Calculators and worksheet/PDF generators

- RentCashflow DSCR Analyzer — debt-service-coverage calculation from figures you enter, with a PDF report
- FlipRadar LOI — maximum-offer calculation and an unsigned letter-of-intent PDF draft
- ListingPulse RE — listing-remarks and maximum-allowable-offer drafts from figures you enter
- LeadScrub RE — CSV name/phone formatting utility
- TaxAppeal Packet Builder — property-tax assessment-appeal evidence worksheet PDF (also sold separately as TaxAppeal Packet Builder)
- ShiftPay Auditor — FLSA 7(k) work-period screening worksheet for fire-protection employees
- Etsy title/tag draft helper — length-checked title and tag drafts from words you supply (no keyword or ranking data)

Media and publishing utilities

- PuzzleForge — Sudoku generator with a KDP-interior PDF export (also sold separately)
- PrintReady DPI — print-prep image utility (also sold separately)
- MockupDrop Watermark — simple apparel-illustration mockup with a tiled text watermark
- AudioMaster LUFS — short WAV loudness utility
- ClipClean — video metadata stripping utility
- ChartSnap Macro — macro-events social card generator from events you enter
- TubeScript — draft script/thread/newsletter text from content you paste
- VectorTrace SVG — simple SVG border-and-label template for cut/engrave use (it is not an image tracer)

Step-by-step: using a tool in the Suite

Exact screens vary by tool, but the workflow the Suite is built around is the same:

1. Sign in with your Suite license.
2. Open the tool you need from the Suite's tool list.
3. Enter or upload the inputs that tool asks for. Suite tools work from what you supply — they generally do not fetch live market, property, keyword, or other outside data for you, unless a tool

specifically says otherwise in its own description.

4. Run the tool and review the result on screen before using it.

5. Where a tool offers a PDF or file export, download it and keep your own copy. Do not assume the Suite stores your files or history for you.

For tools with their own Mergify Digital guide (PropShield, PuzzleForge, PrintReady DPI, RuleGuard, TaxAppeal Packet Builder), follow that guide for product-specific steps, limits, and warnings.

Tips

- Start with the two or three tools you actually bought the bundle for, and learn their input limits before uploading large files or long lists.
- Keep copies of anything important (inputs and exported PDFs/files) outside the Suite.
- Check each tool's own description before relying on its output — several tools are calculators or draft generators whose output you must verify for your own situation.

Troubleshooting

- **Sign-in / license is rejected.** Confirm you used the license exactly as delivered through Whop, that your Whop purchase is active (for monthly plans, that the subscription has not lapsed or been cancelled), and that you are signing in to the Suite access point given in your delivery — not a separate product's page.
- **A tool says it is locked or out of scope.** That tool is not included in your license scope, or your sign-in did not complete. Sign out, sign in again with your Suite license, and retry. If it stays locked, contact support with the tool name.
- **A tool returns an error on your file or input.** Check the input type and size against that tool's description/guide (several media tools accept only specific formats and modest file sizes) and try a smaller or simpler input.
- **You cannot find the access instructions.** Re-open the product in your Whop library/account and your purchase confirmation email — access is delivered through Whop, not by a separate signup email you can request from a public page.
- **A result looks wrong.** Suite calculators calculate from the figures you enter. Re-check your inputs first; if the math still looks wrong, save the inputs and result and send them to support.

Support

Email: **support@mergifystudios.com** (placeholder — mailbox existence unconfirmed; use the support contact shown on the Mergify Digital Whop page if this address does not respond).

Website: <https://mergifydigital.mergifystudios.com>

Please include: "OmniSaaS Suite", the tool name involved, the date of purchase, and a short description of the problem. Do not send passwords, full payment-card numbers, or broker account credentials.

Disclaimer

The OmniSaaS Suite is a bundle of software utilities provided as-is. Individual tools are calculators, draft generators, and file utilities — they are not financial, trading, tax, legal, or other professional advice, they do not guarantee any result, and their outputs are based on information you supply, which is not

independently verified by the Suite unless a tool explicitly states otherwise. Trading and business decisions involve risk; verify important outputs yourself and consult qualified professionals where appropriate. See the individual product guides and disclaimers for tool-specific warnings.
